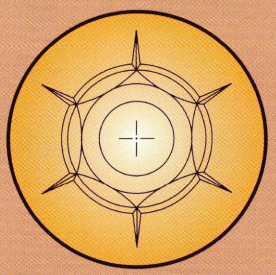
HOT STUFF!
High Performance Ammunition for Self Defense and Law Enforcement

Why do the experts recommend

COR-BON ?



STOPPING POWER

Day-in-day-out on city streets across America, **COR-BON** high-performance ammunition is proving its superior stopping power in use by peace officers in actual shoot-outs!

Trends come and go with the times. Arguments over optimum bullet diameter, weight, tip design, and penetration have been debated for decades. But, regardless of caliber, the single most important constant in stopping power and increased accuracy has always been and still remains - ***VELOCITY***!

HIGHEST VELOCITY

COR-BON makes some of the highest velocity loads available: hot +P and +P+ loads that have traditionally been available only to law enforcement agencies are now available to you!

COR-BON achieves this superior velocity with special high performance powders - while still manufacturing all ammunition to within established SAAMI specifications for pressure.

COR-BON loads start with more energy than others of the same caliber and bullet weight. This, combined with excellent expansion and fragmentation of the well designed hollowpoints, results in more of that energy being delivered to the intended target thus, **PREDICTABLY SUPERIOR STOPPING POWER.**

HOW THEY SHOOT

You'll definitely notice the **COR-BON** difference in power the first time you shoot . Prepare to experience a bit more recoil and muzzle flip. **COR-BON** loads hit with more authority, and **COR-BON's** special formulation of powders accomplishes the task with reduced muzzle flash - a significant factor - making you less of a target, whether you're defending yourself on a dimly lit street, or in your home at midnight!

THE BOTTOM LINE

COR-BON's superior design and precision manufacturing provide the ultimate in reliability and power should the need arise to protect yourself or your family. **COR-BON** may cost a little more, but each and every lot is routinely pressure tested, visually inspected and packaged by hand to insure the ultimate in quality control.

Perhaps that's why...

...more and more experts are recommending COR-BON ammunition.

COR-BON

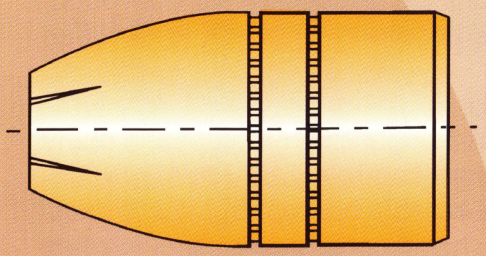
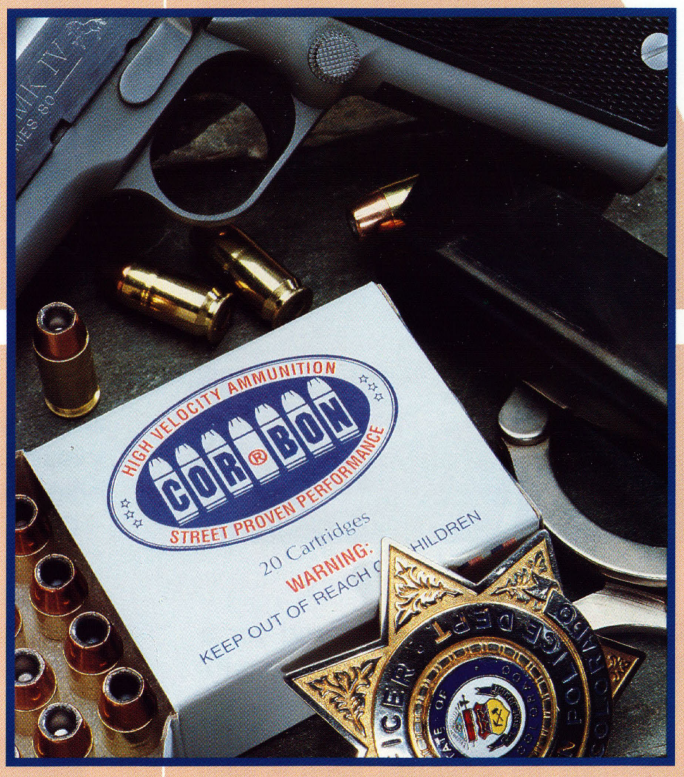
* Available only in 20 Pak

** Especially designed for snubnose revolvers





COR-BON *is serious about providing the very best high velocity ammunition on the market. All +P and +P+ loads are in compliance with established SAAMI specifications. They are designed only for guns capable of handling the higher pressures associated with premium loads. Use only in modern guns specifically designed by the manufacturer for these loads.*

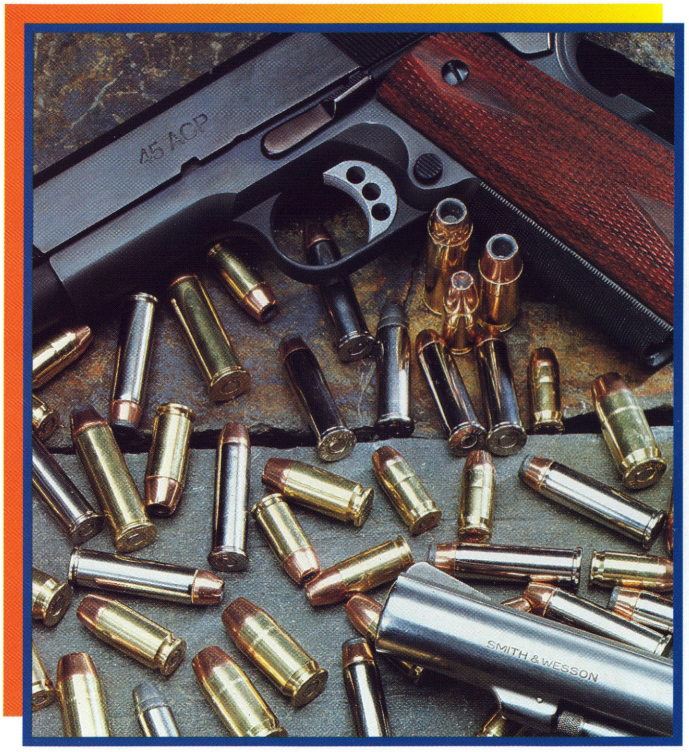
The 40 S&W is a relatively new caliber that has become very popular with many agencies and departments. It has the stopping power of a 45 Auto with the magazine capacity of a 9mm. The **COR-BON** 135 grain JHP is rated at 1300 fps and is listed as a top performer by Evan Marshall's *Stopping Power Updates* (Oct. 95, Handguns)*

The **45 ACP** has been the "ol' reliable" since its introduction in 1911. **COR-BON** ammunition takes this proven veteran, along with the new generation of high-tech 45's, into the next century. The 230 gr BHP has been a favorite heavy load. The 200 gr JHP or 185 gr JHP gives the 45 added speed. **COR-BON** is pushing the velocity of this caliber with the introduction of the new 165 gr JHP at nearly 1250 fps.

The **380 Auto** caliber is very popular for use in concealment backup weapons or light carry pistols. The 90 grain Jacketed hollow point at 1050 fps really makes a compact pistol a serious stopper.

9mm 115 gr JHP This popular round is the choice of many law enforcement agencies, special operations teams, and the military sidearm load for security forces around the world. These +P loads provide high performance velocity with controllable recoil and low muzzle flash. In fact, Gun Test Magazine (June 1995) declared that "**COR-BON's** 9mm 115gr is the best self defense ammunition we have ever tested." The Evan Marshall, *Stopping Power Studies* (Oct. 95, Handguns)* rated this round as the top 9mm round in actual police and civilian shootings. This versatile round is also available with the 124 grain bonded hollow point. This bonded bullet gives more penetration where needed. The 147 grain bullet is loaded at 1100 fps, or as subsonic at 990 fps.

* Copies of these articles are available on request.



The **38 Special** has been a popular round for a number of years. **COR-BON's** high velocity +P+ loads make this a potent self defense load with the energy of many standard 357 loads. *We do not recommend the continuous use of the +P+ loads In Alloy or Aluminum frame revolvers.*

The **357 Magnum** is the "big brother" of the 38 special. This popular revolver is still the carry weapon of choice for many highway patrol departments. **COR-BON** has designed a special 110 grain load for the short 2 to 3 inch barrel revolvers. It is loaded with a fast burning powder that gives good velocity with reduced muzzle flip. A 125 grain load gives you 1450 fps and is the choice for longer barrel revolvers.

COR-BON loads the **10mm** with three high velocity loads; 135, 150, and 180 grain bullets. The 10mm loaded with **COR-BON** ammunition becomes a potent self defense weapon with velocities at over 1400 fps.

COR-BON now loads the new **356 TSW** in either 115 or 124 gr hollow point bullets - the same popular bullets found In our 9mm. The 356 TSW was developed for the shooting team at Smith & Wesson (thus the TSW initials). It Is essentially a longer 9mm, with more powder capacity, producing higher velocity and more energy.

Also added to the lineup is the **357 SIG** which is essentially a 40 S&W necked down to take a 9mm bullet. This gives the 357 SIG a velocity of 1525 fps with the 115 JHP and 1450 fps with the 124 BHP. As more guns are chambered for this round, you will see the popularity of this fine cartridge increase.

9mm Makarov is a popular carry weapon in many countries. Imported handguns are often inexpensive and provide reliable backup, but the imported ammunition has anemic power and is often offered only with full metal jacket bullets. **COR-BON** gives this flexible cartridge a whole new image with a 95 gr JHP at over 1000 fps.

COR-BON also has developed special self defense loads for the **38 SUPER**, the **44 Magnum, 44 Special, 41 Magnum** and the venerable **45 Long Colt**. These self defense loads are not hunting loads. Bullets are selected for rapid expansion, and are loaded with special powders to give low muzzle flash and reduced recoil.

HIGH VELOCITY AMMUNITION

Law Enforcement Tactical/Urban Defense Loads

COR-BON carries several special weapons loads that are carefully designed for law enforcement and tactical team operations. These same loads are available to the general public as Urban Defense Loads. Extra time and effort is devoted to manufacturing and testing each and every one of these critical rounds. You can be assured of the highest quality components and performance.

The **223 Rem 55gr JHP** is an extremely accurate round for use in Tactical Precision Weapons. The 55 gr JHP combines stable flight characteristics and long range accuracy with a rapid expansion bullet. When a defensive encounter calls for precision placement, this is a round that you can trust.

The **308 Win** is loaded with the extremely reliable 125 gr TNT bullet. The 308 Win has been a standard Military and Police round for years, and this load gives an added degree of accuracy to a very potent cartridge. In serious situations, the 308 Win is often required to make initial stopping shots.

For several years there has been an abundance of imported **7.62x39** Russian rifles at reasonable prices. While the rifles are reliable weapons, availability of quality ammunition has been scarce. **COR-BON** offers a highly accurate 125 gr Jacketed Hollow Point with velocity of 2400 fps for this proven veteran. This can provide economic home defense in place of a handgun.

The **300 Whisper** is a unique cartridge, developed by J.D. Jones of SSK Industries, that has found a special use in tactical defense circles. By changing the barrel on an M16 or AR15 you can have the advantages of .30 caliber, utilizing the same magazine and action. The 125 gr JHP bullet gives you 2100 fps with a whopping 1225 fps of energy. A special 220 gr JHP is also available for the Whisper to provide an accurate stable projectile in subsonic, suppressed mode. The Whisper cartridge can also be used in the Thompson/Center Arms Contender pistol for Metallic Silhouette or hunting.

Street proven stopping power. All popular calibers.

Available Through

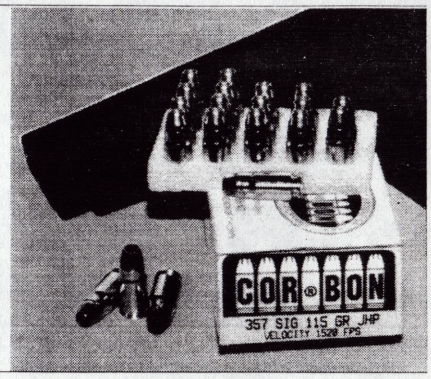
COR-BON also manufactures a complete line of hunting loads. The **Superior® Ammunition Division** - a custom shop, can load popular or specialty calibers; everything from 22PPC to 600 NITRO, including the high performance DAKOTA® calibers. Superior® also produces custom, light weight, Kevlar® stocked rifles.

New for 1996

COR-BON's new 165 gr. JHP round for the popular 45AUTO is turning a lot of heads. At 1250 fps, this is the highest velocity 45AUTO load available on the market!

Available Feb. 96.

The 357SIG fits well into the COR-BON family of super high performance ammunition. With a velocity of over 1500 fps using the 115 gr. bullet and an amazing 1450 fps with the 124 gr. bullet, this relatively new round is gaining popularity all over the country.



COR-BON's legacy continues with the intoduction of high velocity, big game rifle loads featuring the Barnes® X bullet. This special boattail bullets are designed to shoot flatter, more accurately, and will extend the terminal performance of your favorite cartridge.
